

Acoustic Content Sample App

How to start

1. Make sure you have access to repo `<path-to-repo>`
2. `git clone <link to repo>`
3. Checkout **development** branch to get the latest features
4. Open `AcousticContentSampleApp.xcodeproj`
5. Open `AcousticContentSampleApp/Data Layer/URLProvider.swift` file and update
 - `contentHubId` (also known as `tenantId`)
 - `domainName`

with your Watson Content Hub information.

6. Build and run the app.
7. WCHtools (with instructions) required for pushing data model to the Content Hub can be found here:
