Acoustic Content Sample App

How to start

1. Please make sure Content Hub contains provided test data. Test data can be found in `Source Test Data/source_v3.zip`.

   > WCHtools (with instructions) required for pushing data model to the Content Hub can be found here: wchtool docs

2. Make sure you have access to repo `<path-to-repo>`

3. `git clone <link to repo>`

4. Checkout **development** branch to get the latest features

5. Open `AcousticContentSampleApp.xcodeproj`

6. Open `AcousticContentSampleApp/Data Layer/URLProvider.swift` file and update

   - `contentHubId` (also known as `tenantId`)
   - `domainName`

   with your Watson Content Hub information.

7. Build and run the app.
